

# Here's Why AI-generated Music is Garbage

**By William Laurent**

**Music is about mistakes.**

*Mistakes are what give music a heartbeat.*

- ↳ AI doesn't have off days or get inspired by a sunset.
- ↳ It doesn't fall in love with the hot front-row fan.
- ↳ AI never forgets the lyrics to its own song.

There are no encores with AI musicians..

Instead we get annoying system reboots. *Tada!*

**No algorithm can replace the guy who has a tale about every scar on his guitar.**

✓ Listening to AI-produced music is like ordering a pizza

✗ But you get a cardboard circle covered in red paint

✓ It looks like a pizza

✗ But where's the flavor?

✗ Where's the mozzarella soul?

I've been honing my ukulele chops today.

→ Oh, the joy of playing an instrument.

→ I've got finger calluses to prove it!

As an artist passionate about the authenticity and purity of music, I've made a conscious choice to steer clear of AI-generated compositions. My journey now takes an exciting turn as I embark on storing my own music, played and recorded directly by me, as NFTs on the **Internet Computer Protocol (ICP) blockchain**. This decision stems from my commitment to authenticity and my desire to maintain complete control and ownership over my work.

By using the ICP blockchain, I can ensure that the definitive copies of my music — untouched by AI, of course — are securely and transparently stored. This approach not only asserts my rights as a creator but also allows me to connect directly with my audience, bypassing traditional distribution methods.

In this way, my music remains genuinely mine, reflecting my unique artistic expression, offering my fans (Hi Mom!) a pure, unaltered listening experience.

Meanwhile...

My playlist will never be just binary code set to a beat.

P.S. What are the go-to songs on your playlist today?
